CORRIGENDA

Volume 253, December 1987
Volume 22, December 1987

Page F1243: Itzhak Nissim, Beatrice States, Marc Yudkoff, and Stanton Segal. "Characterization of amino acid metabolism by cultured rat kidney cells: study with $^{15}$N." Page F1243: the sentence beginning on the 14th line of the abstract should read: The disappearance of glutamine and glutamate was linear during a 60-min incubation at either pH. Page F1245: the last sentence in the legend of Figure 1 should read: Each data point is the mean ± SE of 4-6 experiments. Page F1246: Table 2, unit of measure was omitted, should be nmol·min$^{-1}$·mg protein$^{-1}$.

Page F1249: the first full sentence in the left column should read: The data of Fig. 8 indicate that the formation of [6-amino]-$^{15}$N-labeled adenine nucleotide is dependent on the $H^+$ concentration of the incubation medium.
