Supplement 1. Effects of Z-VAD and Z-IETD on TNF-α-induced apoptosis. Exponentially growing cells were treated with the indicated amounts of TNF-α and/or Z-VAD (pan-caspase inhibitor) or Z-IETD (caspase-8 inhibitor) for 48 hours. A, the percentage of annexin positive cells of each figure. B, the percentage of Rhodamine 123 negative cells (M1 region) of each figure.
